

# 1- İlk Uygulama Buton, Edittext, Textview ve Intent Kullanımı

## activity\_main.xml dosyası

## Mainactivity.java dosyası

```
import android.widget.EditText;
import android.widget.TextView;

import static com.example.f_marasli.myapplication.R.id.sayi1;
import static com.example.f_marasli.myapplication.R.id.sayi2;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        Thread suzan = new Thread() {
            public void run() {
                try {
                    sleep(5000);
                    //5 saniye sonunda class davet et.
                    startActivity(new
                    Intent(getApplicationContext(), fatih_acti.class));
                }
            }
        };
    }
}
```

```

        }
        catch (InterruptedException e)
        {
            e.printStackTrace();
        }
        finally
        {
            finish();
        }
    }
};
suzan.start();

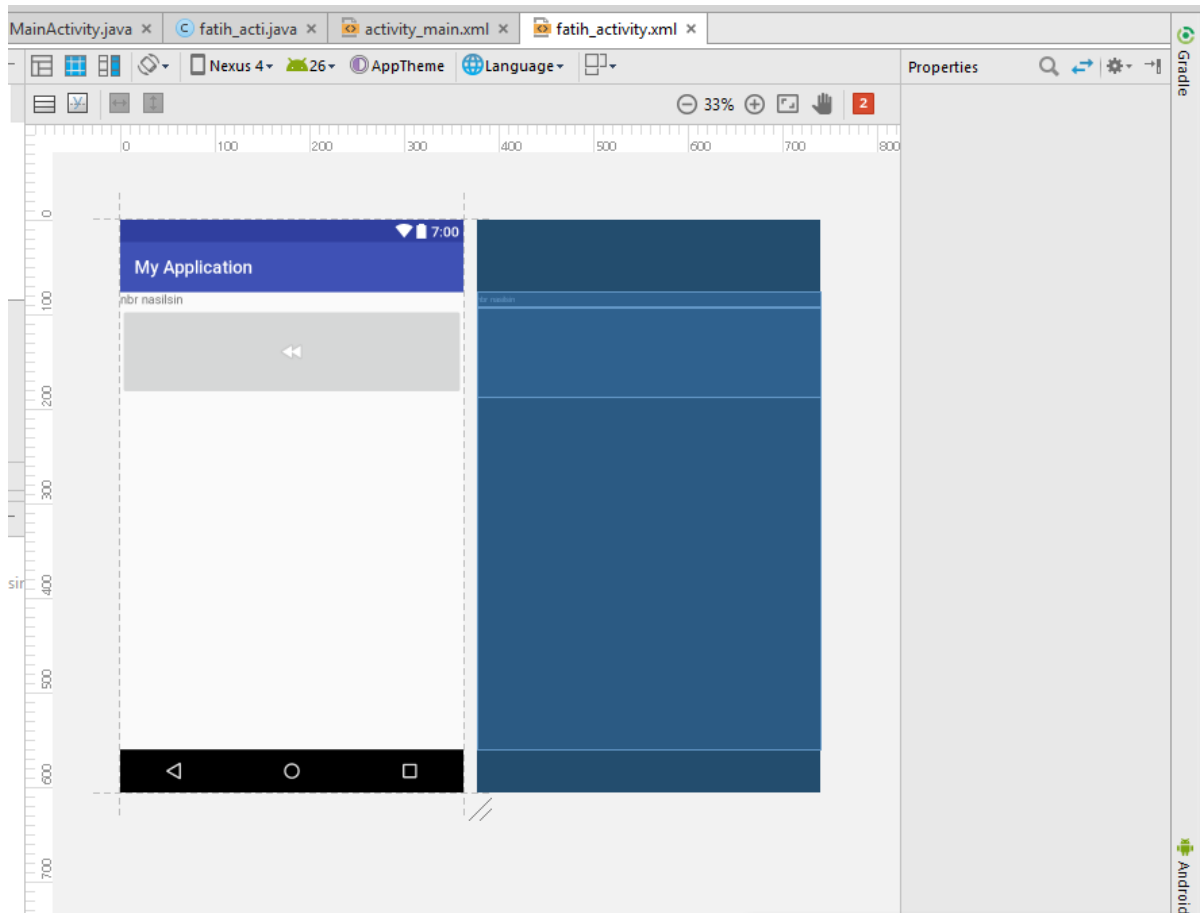

final EditText sayim1 = (EditText) findViewById(sayi1);
final EditText sayim2 = (EditText) findViewById(sayi2);

final TextView sonucum = (TextView) findViewById(R.id.sonuc);
Button hesaplama = (Button) findViewById(R.id.hesapla);
hesaplama.setOnClickListener(new View.OnClickListener() {
    public void onClick(View v)
    {
        float a = Float.parseFloat(sayim1.getText().toString());
        float b = Float.parseFloat(sayim2.getText().toString());
        sonucum.setText(String.valueOf(a+b));
    }
});

Button git = (Button) findViewById(R.id.gitbuton);
git.setOnClickListener(new View.OnClickListener() {
    public void onClick(View v)
    {
        Intent fatih = new Intent(MainActivity.this,
fatih_acti.class);
//Butona basınca intent ile bu activityden yeni activityye git
        MainActivity.this.startActivity(fatih); //intent'i başlat
        MainActivity.this.finish();
    }
});
}
}

```

**fatih\_activity.xml** dosyası

## fatih\_acti.java dosyası

```
package com.example.f_marasli.myapplication;

/**
 * Created by f_marasli on 18.10.2017.
 */

import android.app.Activity;
import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.ImageButton;
import android.widget.Toast;

public class fatih_acti extends Activity{
    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.fatih_activity);

        ImageButton resim = (ImageButton) findViewById(R.id.imgbut);
        resim.setOnClickListener(new View.OnClickListener() {
            public void onClick(View v)
            {
                Intent anacim = new Intent(fatih_acti.this,
MainActivity.class);
//Butona basinca intent ile bu activityden yeni activityye git
                fatih_acti.this.startActivity(anacim); //intent'i başlat
                fatih_acti.this.finish();
            }
        });
    }
}
```

## Ve gerekli izinlerin yapıldığı AndroidManifest.xml dosyası

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.example.f_marasli.myapplication">

    <application
        android:allowBackup="true"
        android:icon="@mipmap/ic_launcher"
        android:label="@string/app_name"
        android:roundIcon="@mipmap/ic_launcher_round"
        android:supportsRtl="true"
        android:theme="@style/AppTheme">
        <activity android:name=".MainActivity">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />

                <category android:name="android.intent.category.LAUNCHER"
            />
            </intent-filter>
        </activity>

        <activity android:name=".fatih_acti" android:label="My
Application">

        </activity>
    </application>

</manifest>
```
